

Sara Aranda

Laboratory Research Fellow

“I’m very passionate about both science and global health, and thought the Siemens Foundation-PATH Fellowship allowed me a unique opportunity to combine both my scientific knowledge and my passion for global health.”

Sara Aranda will receive her Master’s of Science degree in Global Health from Northwestern University in the fall of 2017. She hopes to continue her study in global health to the PhD level.

Sara has been fortunate to have had the opportunity to volunteer internationally in a variety of settings. Through this experience, she saw the need for simple, sustainable and efficacious solutions to many global health problems. She is interested in applying her passion for science by working on larger scale interventions that will target large populations of people.

In addition to her interest in global health, Sara is interested in sustainable development and its intersection with global health – specifically where scientific work can align with other types of development to create a broader, sustainable positive impact on the community.
